

API PERFORMANCE MONITOR

An Observability Platform for Web Services

THE PROBLEM

APIs are the backbone of modern software architectures. Downtime or poor performance can directly impact users and business. Detecting issues early and understanding system behavior is essential.

Downtime
& Failures

Performance
Degradation

Lack of
Observability

OUR SOLUTION

A complete monitoring and observability platform that helps teams monitor public and private APIs in real time, analyze performance, and receive alerts when something goes wrong.

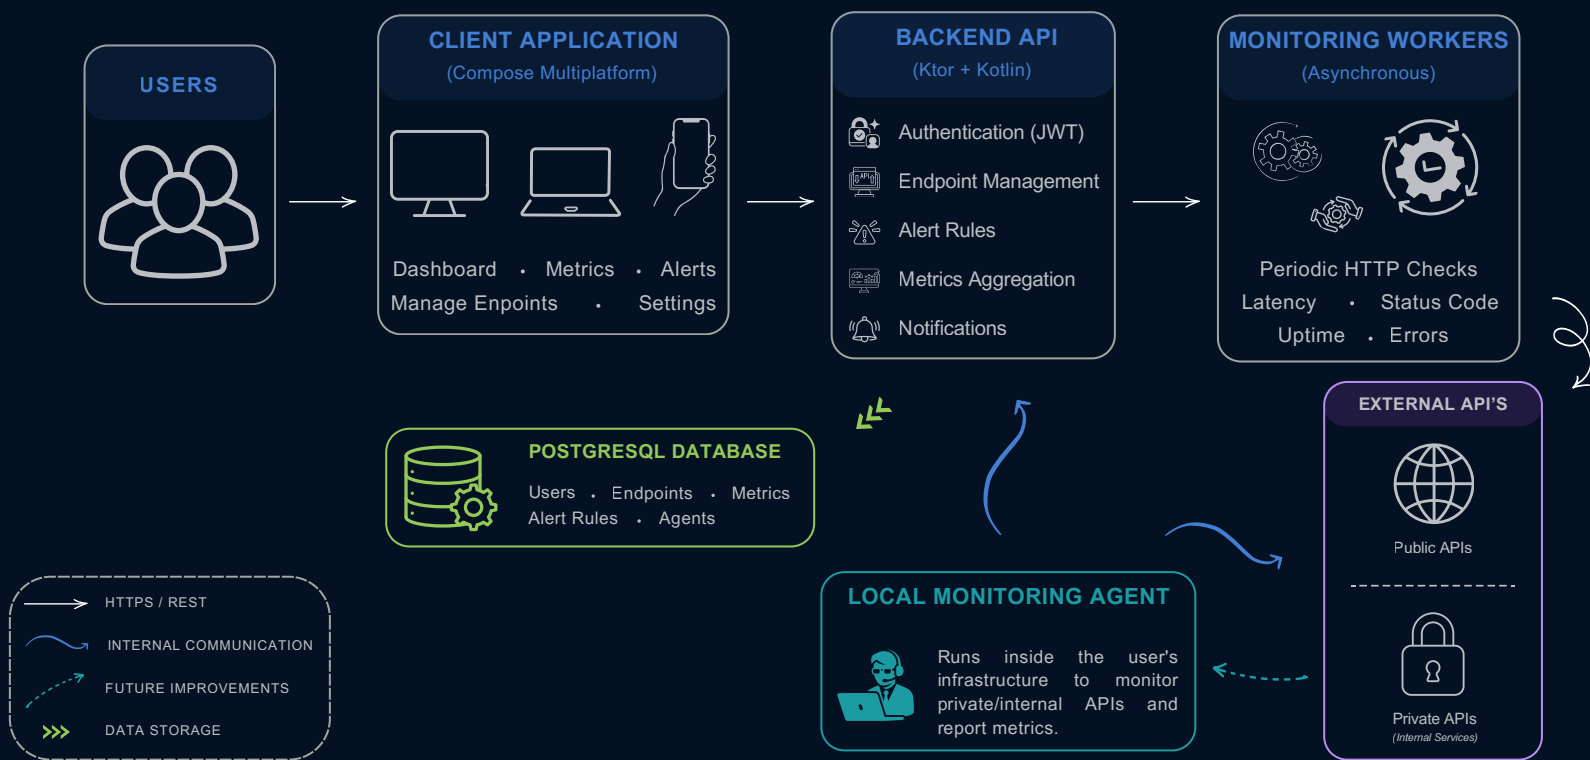

- ✓ Continuous HTTP monitoring
- ✓ Real-time metrics & historical data
- ✓ Custom alert rules & notifications
- ✓ Local agents for private APIs
- ✓ Modern, cross-platform client

KEY BENEFITS

1. Early issue detection
2. Improve reliability & uptime
3. Understand API performance
4. Secure Monitoring (Private APIs)
5. Scalable Architecture

SYSTEM ARCHITECTURE

CORE FEATURES

Endpoint Monitoring
Configure URLs, intervals and authentication

Metrics Collection
Latency, status codes, uptime and more

Dashboards & Charts
Real-time and historical visualizations

Alert Rules
Custom conditions & thresholds

Notifications
Webhooks (Discord, Slack, ...)

Local Monitoring Agents
Monitor private APIs securely

MONITORING METRICS

Latency
Response time in milliseconds

Uptime
Availability based on successful requests

Status Codes
Track HTTP response codes

Historical Data
Analyze trends over time

ALERT RULES EXAMPLES

Latency > 1000ms
(AVG over 5 min)

HTTP Status Code = 500
(COUNT ≥ 3)

Service Down
(ALL requests fail)

Custom conditions & cooldowns

Notifications via Discord Webhooks

TECHNOLOGIES

Kotlin

Ktor

Compose Multiplatform

PostgreSQL

Exposed ORM

JWT

Discord Webhooks
